WHEAT FIBER

Che cos'è esattamente?

La paglia di grano è lo stelo rimasto dopo la raccolta dei chicchi di grano.Tradizionalmente, è stato trattato come uno spreco. In alcuni paesi, gli agricoltori lo bruciano, contribuendo all'inquinamento atmosferico e creando un pericolo per la salute pubblica. Tuttavia, questi gambi hanno ancora valore. Recuperiamo questo materiale e lo utilizziamo per realizzare i nostri prodotti in paglia di grano.

What exactly is it?

Wheat straw is the stalk left over after wheat grains are harvested. Traditionally, it has been treated as a waste. In some countries, farmers burn it, contributing to air pollution and creating a public health hazard. However, these stalks still have value. We recover this material and use it to make our wheat straw products.

ALTERNATIVE MATERIAL TO PLASTIC

Perché lo usiamo?

Come sappiamo le foreste sono minacciate di estinzione in tutto il mondo, quindi è importante per noi trovare materiali alternativi che non richiedono risorse forestali. Con la fibra di grano, è ancora possibile utilizzare prodotti di "carta" usa e getta ad alte prestazioni, scegliendo un prodotto che è fatto di fibra di grano rapidamente rinnovabile e rigenerata anziché alberi. Ciò che è ancora piu' rilevante è che alla fine della sua vita, puoi inviare la tua conchiglia alla struttura di compostaggio commerciale anziché a una discarica.

Why do we use it?

As we know forests are threatened and endangered around the world, so it is important for us to find alternative materials that do not require virgin forest resources. With wheat fiber, you can still use high performing disposable "paper" products, choosing a product that is made from rapidly renewable and reclaimed wheat fiber instead of trees. What's even better is that at the end of its life, you can send your clamshell to the commercial composting facility instead of a landfill.

50/1000

L'R-PET (polietilene tereftalato riciclato) proviene dalla plastica che è già stata utilizzata per l'imballaggio, come le bottiglie di plastica. Questa plastica viene smistata, pulita e trasformata in modo che possa essere riutilizzata come prodotto alimentare, come approvato dalle autorità federali.

R-PET (recycled polyethylene terephtalate) comes from plastic that has already been used for packaging, such as plastic bottles. This plastic is sorted, cleaned and transformed so that it can be reused as a food product, as approved by federal authorities.

NEW PLA MATERIAL!

100% BIODEGRADABLE | CORN PLASTIC | YEAR OF ECOLOGY

La plastica PLA o l'acido polilattico è un materiale plastico a base vegetale, che comunemente utilizza amido di mais come materia prima. Il PLA è un polimero termoplastico completamente biodegradabile costituito da materie prime rinnovabili.

PLA plastic or polylactic acid is a vegetable-based plastic material, which commonly uses cornstarch as a raw material. PLA is a fully biodegradable thermoplastic polymer consisting of renewable raw materials.

100% RENEWABLE

La plastica di mais o, a volte, di acido poliacrilattico (PLA) è prodotta come il tessuto di mais ed è biodegradabile al 100%. Quando il mais viene trasformato in PLA, il PLA può essere trasformato in abbigliamento e prodotti.
L'abbigliamento in PLA è noto per la sua elasticità, poiché mantiene la sua forma dopo più lavaggi. Il PLA è anche noto per la sua capacità di traspirazione.

Corn plastic or sometimes Poly Lactide Acid (PLA) is made in the same way as corn fabric and is 100% biodegradable. When corn is made into PLA, PLA can be transformed into clothing and products. PLA clothing is known for its elasticity, as it will keep its shape after multiple washings. PLA is also known for its ability to spread moisture through fabric so it can evaporate more easily.

FRISBEE MADE OF BAMBOO FIBER

R-PET
HIGHLY RECYCLABLE PLASTIC
ECO-PLASTIC

Che cos'è esattamente?

L' R-PET è il tipo più comune di resina chimica. Per creare R-PET vergine, i produttori estraggono petrolio greggio e gas naturale dalla terra, quindi lo processano e lo riscaldano per formare un liquido fuso. Trasformano questo liquido in fibre per creare tessuto in poliestere, oppure lo stampano e lo solidificano in contenitori di plastica R-PET. Come fibra, il poliestere può essere utilizzato per realizzare qualsiasi cosa, da vestiti e coperte a borse e articoli promozionali.

What exactly is it?

R-PET is the most common type of plastic resin. To create virgin R-PET, producers extract crude oil and natural gas from the Earth, then process and heat it to form a molten liquid. They spin this liquid into fibers to create polyester fabric, or they mold and solidify it into R-PET plastic containers.
As a fiber, polyester can be used to make anything from clothing and blankets to bags and promotional items.

R-PET IS THE FUTURE

L' R-PET viene creato riciclando materie plastiche precedentemente utilizzate come materiali di imballaggio. Questi includono bottiglie di plastica, per esempio. Una volta raccolto, viene smistato e pulito, dopodiché viene trasformato in R-PET, che può quindi essere utilizzato per nuovi imballaggi. Questo è approvato a livello federale e significa effettivamente che puoi dare a ogni bottiglia una nuova vita.

R-PET is created by recycling plastics that were previously used as packaging materials. These include plastic bottles, for instance. Once collected, it is sorted and cleaned, after which it is transformed into R-PET, which can then be used for new packaging. This is federally approved and effectively means that you can give each bottle a new lease of life.

ORGANIC COTTON

PROTECTS THE HEALTH OF PEOPLE AND THE PLANET BY REDUCING THE OVERALL EXPOSURE TO TOXIC CHEMICALS

Che cos'è esattamente?

Il cotone biologico (o cotone naturale) è un altro ottimo tessuto ecologico. È coltivato senza l'uso di pesticidi, erbicidi o altri fertilizzanti chimici ed è semplicemente migliore per la salute e l'ambiente. L'agricoltura biologica (cibo e fibre) protegge la salute delle persone e del pianeta riducendo l'esposizione complessiva a sostanze chimiche tossiche da pesticidi sintetici che possono finire nel terreno, nell'aria, nell'acqua e nelle forniture alimentari e che sono associate a conseguenze sulla salute , dall'asma al cancro. Poiché l'agricoltura biologica non utilizza pesticidi tossici, la scelta dei prodotti biologici è un modo semplice per proteggere l'ambiente e se stessi.

What exactly is it?

Organic cotton (or natural cotton) is another great eco friendly fabric. It is grown without the use of pesticides, herbicides or other chemical fertilizers, and is simply better for your health and the environment. Organic agriculture (food and fiber) protects the health of people and the planet by reducing the overall exposure to toxic chemicals from synthetic pesticides that can end up in the ground, air, water and food supply, and that are associated with health consequences, from asthma to cancer. Because organic agriculture doesn't use toxic pesticides, choosing organic products is an easy way to help protect the environment and yourself.

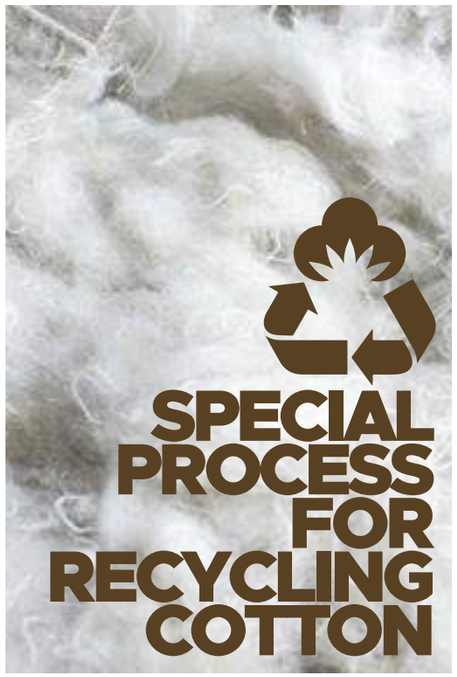

RECYCLED COTTON

Che cos'è?

Il cotone riciclato può essere generalmente definito come tessuto di cotone standard convertibile in fibra di cotone che può essere riutilizzato nei prodotti tessili. Il cotone riciclato è anche comunemente chiamato cotone rigenerato. Il cotone riciclato comprende la materia prima riciclata, nonché il cotone usato, ricondizionato e rielaborato.

What is it?

Recycled cotton can be generally defined as converting standard cotton fabric into cotton fiber that can be reused in textile products. Recycled cotton is also commonly referred to as regenerated cotton, reclaimed cotton. Recycled cotton includes recycled raw material, as well as used, reconditioned, and re-manufactured components. There are many benefits in using recycled cotton.

ALUMINIUM

Perché le bottiglie in alluminio sono un'ottima scelta?

- Peso leggero
- Protezione UV
- Resistente alla corrosione
- Non magnetico
- Non combustibile
- Riciclabile

Why Aluminum Bottles are a Great Choice?

- Light Weight
- UV Protection
- Corrosion Resistant
- Non - Magnetic
- Non - Combustible
- Recyclable

Perchè scegliere l'alluminio?

L'alluminio è notevole per la sua bassa densità e la sua capacità di resistere alla corrosione attraverso il fenomeno della passivazione. L'alluminio non è tossico come i metalli pesanti. È classificato come non cancerogeno dal Dipartimento della salute e dei servizi umani.

Why choosing Aluminium?

Aluminium is remarkable for its low density and its ability to resist corrosion through the phenomenon of passivation. Aluminium is not as toxic as heavy metals. It's classified as a non-carcinogen by the United States Department of Health and Human Services.

STAINLESS STEEL

CORROSION RESISTANT

Perché scegliere L'ACCIAIO INOSSIDABILE?

L'acciaio inossidabile è particolarmente noto per la sua resistenza alla corrosione. Le aggiunte di molibdeno aumentano la resistenza alla corrosione nella riduzione degli acidi e contro l'attacco corrosivo nelle soluzioni di cloruro. Pertanto, esistono numerosi gradi di acciaio inossidabile con diversi contenuti di cromo e molibdeno per adattarsi all'ambiente che la lega deve sopportare. La resistenza alla corrosione e alle macchie, la bassa manutenzione e la lucentezza familiare rendono l'acciaio inossidabile un materiale ideale per molte applicazioni, in particolare cibi e bevande.

Why choose STAINLESS STEEL?

Stainless steel is most notable for its corrosion resistance. Additions of molybdenum increases corrosion resistance in reducing acids and against pitting attack in chloride solutions. Thus, there are numerous grades of stainless steel with varying chromium and molybdenum contents to suit the environment the alloy must endure. Resistance to corrosion and staining, low maintenance, and familiar luster make stainless steel an ideal material for many applications expecially food and drink.

Perché usiamo L'ACCIAIO?

È usato perché è:

- non tossico
- non assorbente
- resistente agli acidi
- stampabile
- incisione laser

Why do we use STEEL?

It's used because it is:

- non-toxic,
- non-adsorptive
- acids resistance
- laser engraved
- printable

tritan™ LIGHT AND GOOD FOR DRINKING

Che cos'è il tritan?

Il tritano è un polimero ed il polimero è una sostanza formata dalla combinazione di diverse molecole identiche (monomeri) tra loro. È senza BPA e non contiene il bisfenolo A. È definito come materiale di nuova generazione perché presenta eccellenti caratteristiche quali: resistenza alle temperature, possibilità di essere lavato frequentemente.

What is tritan ?

Tritan is a polymer and the polymer is a substance formed by the combination of several identical molecules (monomers) between them. It is BPA-FREE and it does not contain the toxic chemical Bisphenol A.
It is defined as a new generation material because it has excellent characteristics such as: resistance to temperatures, possibility of being washed frequently.

BPA - FREE | no TOXIC

Perchè usiamo il tritan?

È usato perché è:
- non tossico
- frequentemente lavabile
- resistente alle alte temperature
- stampabile
- senza il BPA

Why we use tritan?

It's used because it is:
- non-toxic,
- wash frequently
- resistance to temperature
- BPA-FREE
- printable
